

# Statistical report for CoalTech2051 - Delphi survey (Round I)

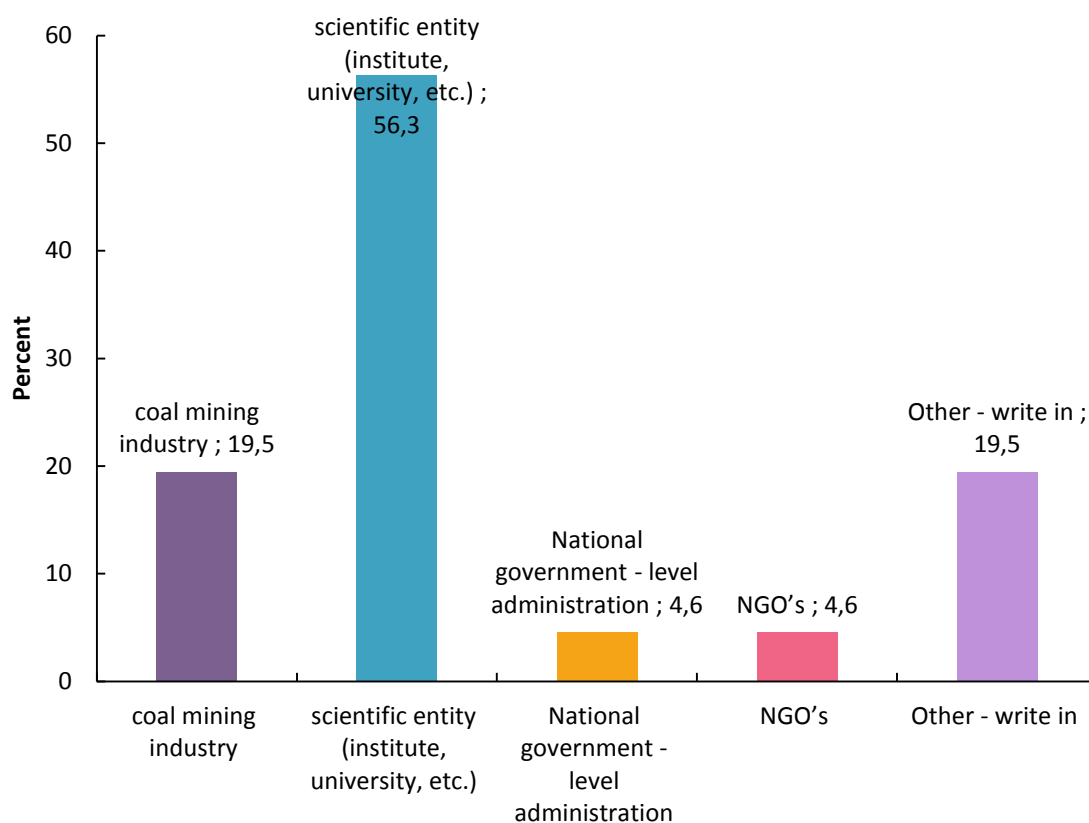

CoalTech2051 - Delphi survey (Round I)

## Response Statistics

	Count	Percent
Complete	63	60
Partial	42	40
Disqualified	0	0
Totals	105	

## 1. Which type of institution or sector do work in:

Value	Percent *	Count
coal mining industry	19.5%	17
scientific entity (institute, university, etc.)	56.3%	49
National government - level administration	4.6%	4
NGO's	4.6%	4
Other	19.5%	17

\*expert may identify more than one institution

2. Did you participate in the implementation of research projects related to coal?

3. How many projects?

#### 4.How many years of experience you have?

#### 5.Which country or world region are you based in?

## 6.SOCIAL Coal R&D:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	Responses
	Row %					Count
Improves health and safety.	2.9%	2.9%	7.2%	55.1%	31.9%	69
Creates new employment outside of R&D.	1.4%	7.2%	17.4%	50.7%	23.2%	69
Improves land planning and control and approvals processes.	3.0%	7.5%	28.4%	49.3%	11.9%	67

### Experts propositions:

- Continues the cycle of climate, social & environmental destruction
- Contributes to revitalize regions through the development of clusters, skills on innovation etc.
- Creates opportunities for upgrading coal R&D
- Ensures equal technological advancement worldwide
- Explain how coal is important for our life
- Helps keeping competitive position of coal energy
- Improve acceptance of coal as clean energy resources
- Improves indoor and outdoor air quality
- Increases social acceptance of related projects
- Inform public opinion on new clean coal processes
- Is an utter waste of money and time that would be better spent helping communities justly transition away from coal
- Improes accptance of coal as natural resources and raw material
- Indigeneous raw material resource
- New material like coal fibre replacing steel

## 7.TECHNOLOGICAL Coal R&D:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	Responses
	Row %					Count
Develops advanced clean coal technologies.	1.4%	1.4%	8.7%	37.7%	50.7%	69

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	Responses
	Row %					Count
Exploits new information and communications technology (ICT).	%	7.2%	23.2%	49.3%	20.3%	69
Leads to new applications for coal.	3.0%	3.0%	9.0%	52.2%	32.8%	67

#### Experts propositions:

- Creates ongoing utility for a resource that has to stay in the ground if we are to keep the planet habitable
- Decrease in coal consumption
- Enables to overcome challenges that come with fight with climate changes
- Helps to identify innovative technologies related to the circular economy
- Impacts combustion technologies
- Improve and sustain knowledge for R&D
- Integrates digitalization into the related technological applications
- Is a waste of time and money that would be better spent on clean energy technologies
- Develop new carbon materials based on coal
- Provides new paths for various resource-related industries (chemical/material/production/processing etc.)
- Improves catalytic glowing instead of flame burning
- Improves and sustain education of the sector
- Use CO<sub>2</sub> as raw material

#### 8.ENVIRONMENTAL Coal R&D:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	Responses
	Row %					Count
Supports climate action.	4.4%	5.9%	16.2%	42.6%	30.9%	68
Reduces emissions to land, air and water.	1.5%	2.9%	5.9%	51.5%	38.2%	68
Quantifies environmental impact of particular technologies	%	1.5%	8.8%	54.4%	35.3%	68

**Experts propositions:**

- Broad (erroneous) belief that accidental emissions are inherent in the fuel
- Develops new tools for the optimal environmental reclamation planning of the related projects:
- Gives us information that is ultimately useless as we know coal use has to end in the next 10 years
- Helps mitigating future energy problems
- Identifies coal substitution opportunities
- Improved domestic technologies are being overlooked
- Provides solutions for the environmental protection and successful gradual closure of related activities
- Reduces anthropogenic fingerprint with reuse and processing wastes
- Reduces the use of natural resources
- Delays decarbonization

**9.POLITICAL Coal R&D:**

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	Responses
	Row %					Count
Reduces energy-import dependency.	2.9%	11.6%	20.3%	27.5%	37.7%	69
Provides technical support to strategic policy objectives, laws and regulations.	%	4.3%	14.5%	49.3%	31.9%	69
Improves environmental monitoring guidelines.	1.4%	1.4%	15.9%	46.4%	34.8%	69

**Experts propositions:**

- Coal gasification provides low cost alternative to imported natural gas
- Creates yet more time wasting roadblocks to solving the climate crisis
- Helps to develop strategic policy objectives
- Improves the economic diversification and technological transition
- Provides a distraction for politicians looking to halt climate action
- Creates the illusion of "clean coal"
- Develop coal industry where none existed before
- Improves resource economy countrywide and worldwide

## 10. Additional observations and comments

Results in the form of a cloud of topics:

11. T.1.1. Ensuring the exploitation of coal reserves based on methods and tools for identifying the size and availability of resources.

Value	Percent	Count
Strongly disagree	3.2%	2
Disagree	8.1%	5
Neutral	21.0%	13
Agree	50.0%	31
Strongly agree	17.7%	11
	Totals	62

**12.T.1.2. Development of breakthrough technologies for alternative (unconventional) methods of resource exploitation**

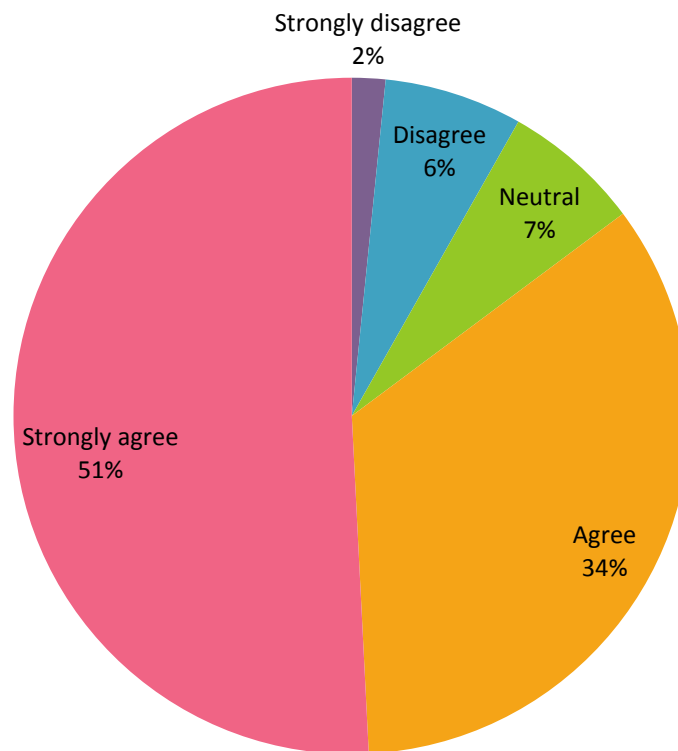

Value	Percent	Count
Strongly disagree	3.2%	2
Disagree	3.2%	2
Neutral	9.7%	6
Agree	40.3%	25
Strongly agree	41.9%	26
Not applicable	1.6%	1
	Totals	62

**13.T.1.3. Improvement of coal production and processing technologies improving the efficiency and productivity of mining processes**

Value	Percent	Count
Strongly disagree	1.6%	1
Disagree	3.2%	2
Neutral	17.7%	11
Agree	33.9%	21
Strongly agree	43.5%	27
	Totals	62

14.T.1.4. Satisfying the energy needs of the global economy still depends on coal, which requires the development of more efficient and low-carbon technologies.

Value	Percent	Count
Strongly disagree	1.6%	1
Disagree	6.6%	4
Neutral	6.6%	4
Agree	34.4%	21
Strongly agree	50.8%	31
	Totals	61

15.T.1.5. Further exploitation of coal deposits requires, first of all, safe and healthy working conditions.

Value	Percent	Count
Strongly disagree	3.2%	2
Neutral	6.5%	4
Agree	40.3%	25
Strongly agree	50.0%	31
	Totals	62

16.T.1.6. At all stages in the coal value chain, environmental issues have to be addressed.

Value	Percent	Count
Strongly disagree	1.6%	1
Neutral	4.8%	3
Agree	33.9%	21
Strongly agree	59.7%	37
	Totals	62

17.T.2.1. The energy transition may drive the development of a new generation of coal conversion technologies to provide a greater variety of products from coal with new applications.

Value	Percent	Count
Strongly disagree	3.2%	2
Disagree	4.8%	3
Neutral	8.1%	5
Agree	38.7%	24
Strongly agree	45.2%	28
	Totals	62

**18.T.2.2. A fall in demand for coal as an energy source affects the development of research on alternative uses.**

Value	Percent	Count
Strongly disagree	3.2%	2
Disagree	9.7%	6
Neutral	16.1%	10
Agree	37.1%	23
Strongly agree	32.3%	20
Not applicable	1.6%	1
	Totals	62

19.T.2.3. Resource-intensive and energy-intensive processes may be replaced by closed-cycle or circular technologies.

Value	Percent	Count
Disagree	11.3%	7
Neutral	27.4%	17
Agree	40.3%	25
Strongly agree	21.0%	13
	Totals	62

20.T.2.4. In regions where mining activity is being terminated, it is necessary to develop and implement solutions enabling the management and use of post-mining areas in order to preserve their value.

Value	Percent	Count
Disagree	1.6%	1
Neutral	4.8%	3
Agree	25.8%	16
Strongly agree	67.7%	42
	Totals	62

## 21. Additional observations and comments

Results in the form of a cloud of topics:

**22.Coal exploration - The exploitation of coal resources depends on having good knowledge of deposits at all stages, from prospecting through to post-mining. The development of new methods and tools can increase the base of economic reserves.**

	2020	2025	2030	2035	2040+	never	Responses
	Row %						Count
Deep penetration geophysical techniques with improved resolutions to depths of 1000 m or more	15.5%	25.9%	22.4%	12.1%	13.8%	10.3%	58
Resource data analysis tools with improved data visualization and integration with resource management tools	17.5%	47.4%	15.8%	12.3%	1.8%	5.3%	57
Conceptual modelling of coal deposits	20.7%	36.2%	19.0%	8.6%	10.3%	5.2%	58

**Experts propositions:**

- Advanced tools for forecasting run-off coal quality
- Availability of coal deposits by their depth, LHV or "challenges" (e.g. sulphur and Hg content)
- Hydrogeology at depths of 1000m plus
- Reliable geotechnical and hydrogeological modeling of the deposits
- Waste characterization for effective post mining activities

23.Coal extraction - The economics of coal production can improve dramatically with technological transformations in the mining sector. Incremental improvements also offer a way to accelerate productivity improvements.

	2020	2025	2030	2035	2040+	never	Responses
	Row %						Count
Coal extraction methods to increase resource recovery and reduce waste	12.1%	34.5%	20.7%	13.8%	10.3%	8.6%	58
Automation, remote control and robotisation of mining equipment	10.2%	25.4%	35.6%	10.2%	16.9%	1.7%	59
Handling and processing technologies to improve efficiency and quality	15.5%	39.7%	27.6%	5.2%	10.3%	1.7%	58

**Experts propositions:**

- Advanced mine planning and scheduling in relation to energy efficiency of mining operation
- Advanced tools for optimizing mining equipment operation in relation to specific mining conditions
- Development of tools for monitoring and minimizing environmental impacts of mining operations:
- Fully automated extraction up to delivery to port

**24.Unconventional coal exploitation - Alternative ways to exploit coal resources, such as coalbed methane, may depend on technological breakthroughs.**

	2020	2025	2030	2035	2040+	never	Responses
	Row %						Count
Deep drilling technologies (>1000 m)	13.8%	29.3%	24.1%	12.1%	12.1%	8.6%	58
Modelling exploitation over time	14.0%	31.6%	19.3%	19.3%	14.0%	1.8%	57
Innovative exploitation techniques	10.5%	17.5%	24.6%	21.1%	24.6%	1.8%	57

**Experts propositions:**

- Broader application of cost-effective exploitation techniques
- Environmental modeling and risk analysis methods
- Modeling and investigating the effect of unconventional coal exploitation on the stability of surrounding rocks
- Monitoring exploitation and environment on time

**25.Coal conversion and processing - The energy transition may drive the development of a new generation of coal conversion technologies to provide a greater variety of products from coal with new applications.**

	2020	2025	2030	2035	2040+	never	Responses
	Row %						Count
Crushing, separation and processing of coal seams, including ultrafines	22.8%	31.6%	24.6%	12.3%	3.5%	5.3%	57
Hydrogen production from coal	15.8%	17.5%	26.3%	15.8%	19.3%	5.3%	57
Fuels and chemical synthesis from coal	11.9%	32.2%	20.3%	18.6%	15.3%	1.7%	59

**Experts propositions:**

- CCS
- Recycling and secondary fuel /chemical production from CO<sub>2</sub>

**26.Coal utilisation - Conventional coal-fired power generation continues to evolve and there appears to be a clear route forward towards higher efficiency and lower emissions.**

	2020	2025	2030	2035	2040+	never	Responses
	Row %	Row %	Row %	Row %	Row %	Row %	Count
High-efficiency, low-emission technologies at flexible conventional thermal power plants	18.3%	33.3%	18.3%	6.7%	16.7%	6.7%	60
Coal gasification and co-gasification with wastes (e.g. RDF/SRF, electronic, plastic) and biomass	16.7%	36.7%	18.3%	11.7%	10.0%	6.7%	60
Direct carbon fuel cells	3.4%	22.4%	29.3%	19.0%	20.7%	5.2%	58

27. Non-energy uses of coal - As coal use for its energy value declines in Europe, non-energy applications could become an important part of the market for coal.

	2020	2025	2030	2035	2040+	never	Responses
	Row %						Count
Carbon-based materials (e.g. carbon fibres and nanostructures)	13.8%	29.3%	29.3%	10.3%	15.5%	1.7%	58
Chemicals	15.3%	37.3%	23.7%	5.1%	18.6%	%	59
Fertilisers	17.2%	27.6%	25.9%	10.3%	19.0%	%	58

Experts propositions:

- Critical & Rare Earth Element extraction from coal ash
- Geopolymers from coal ash

**28. Carbon recycling and materials recovery - Resource-intensive and energy-intensive processes may be replaced by closed-loop technologies.**

	2020	2025	2030	2035	2040+	never	Responses
	Row %						Count
Production of clean gas and liquid fuels from CO2 (and renewable energy)	8.5%	22.0%	27.1%	22.0%	13.6%	6.8%	59
Integration of energy technologies in a “closed carbon-cycle economy”	3.4%	17.2%	29.3%	20.7%	22.4%	6.9%	58
Recovery of rare earth elements and other materials of value from coal, coal wastes and coal ash	3.4%	25.4%	23.7%	23.7%	16.9%	6.8%	59

**Experts propositions:**

- CCS

**29. Health and safety - The health and safety of workers is the first priority, especially underground workers.**

	2020	2025	2030	2035	2040+	never	Responses
	Row %						Count
Remote controlled fire and rescue operations	15.5%	36.2%	31.0%	10.3%	5.2%	1.7%	58
Predicting rock bursts and gas outbursts	19.3%	29.8%	22.8%	15.8%	10.5%	1.8%	57
Safety and worker psychology	34.5%	27.6%	22.4%	6.9%	5.2%	3.4%	58

30.Environmental issues - At all stages in the coal value chain, environmental issues have to be addressed.

	2020	2025	2030	2035	2040+	never	Responses
	Row %						Count
Water management, conservation and treatment	40.7%	32.2%	13.6%	6.8%	6.8%	%	59
Capturing and using methane from mines, including ventilation air methane	23.7%	30.5%	20.3%	11.9%	11.9%	1.7%	59
CO <sub>2</sub> capture, use and storage	17.2%	22.4%	20.7%	19.0%	15.5%	5.2%	58

**31. Post-mining and coal asset repurposing - Regions with coal mines and coal power plants have to find solutions for their safe management and use after closure. Imaginative new developments can turn liabilities into assets.**

	2020	2025	2030	2035	2040+	never	Responses
	Row %						Count
Low-grade heat recovery and energy storage (e.g. geothermal, compressed air, pumped storage, hydrogen)	8.6%	29.3%	32.8%	19.0%	6.9%	3.4%	58
Use of coal tailings and other mine wastes	10.2%	32.2%	27.1%	15.3%	8.5%	6.8%	59
Evaluation of new business models	24.1%	20.7%	31.0%	6.9%	12.1%	5.2%	58
